Subject: Potential Flooding Impact on June 11-12 Board Meeting

At this time, we do not anticipate the level of Squaw Creek in Ames to impact the June 11-12 Board meeting scheduled in the Scheman Building on the ISU campus. According to David Miller, Director of Facilities Planning and Management Operations at ISU, Squaw Creek would need to reach a level of 17 feet to impact the Scheman Building; the current level of Squaw Creek is 9.1 feet and falling (flood stage is 9 feet).

However, Mr. Miller has advised that due to the saturated ground, a flooding situation could result from significant rainfall. He reports that while one inch of rain may not impact the Scheman Building, rainfall of two inches could easily create a flooding problem in this area.

We will notify you further if there are concerns of possible flooding conditions that would impact this week's Board meeting at the Scheman Building. Please let us know if you have any questions.

Thank you.
